

## Session I Part 8: Adding Transitions

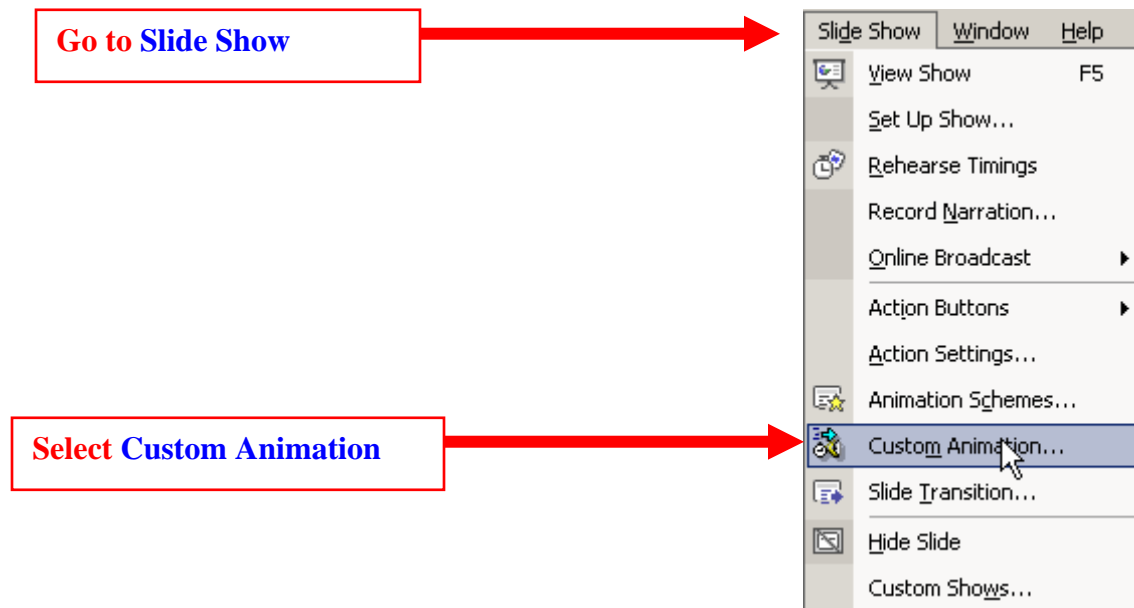

In this session you will learn how to add a transitional effect to text and objects using custom animation features.

To begin you will need to highlight the first sentence in your presentation by holding down the left mouse key and dragging the “I” bar across the words, “**What is a volcano?**”

Notice how the text is outlined in yellow. The yellow highlight indicates which words will be affected when the transition is added.

Next go to the main menu bar located at the top left hand side of the screen.

This action will create a new tool bar that will appear on the left hand side of the screen. To create the first custom animation to the highlighted text you will need to perform the following steps.

**Step One: Select the Add Effect Menu bar.**

**Step Two: Select Entrance.**

**Step Three: Select Fade.**

Select an element of the slide, then click "Add Effect" to add animation.

1 What is a volcano?

Repeat steps one, two and three until all three sentences have a fade entrance affect added. When you have completed the three steps in adding a transition three boxes with a number assigned should appear at the head of each sentence.

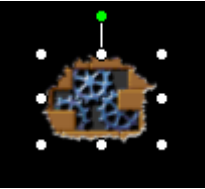

1 What is a volcano?

2 Describe in general how a volcano is formed.

3 Why was the eruption of the volcano at Paricutin, Mexico, so important to science?

Next you will learn how to make a custom animation that enters and exits a slide. There are two gif files a gyroscope and a gearbox located at the bottom corners of the slide.

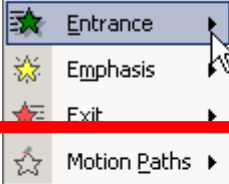

**1. Select the Gearbox by clicking on it.**

**2. Select Add Effect**

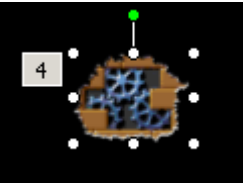

**3. Select Entrance**

**4. Select Ease In**

Notice the number four appears next to the gearbox. The 4 indicates that the gearbox will enter the slide as the fourth item.

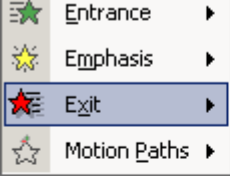

The next step will be to add an exit affect.

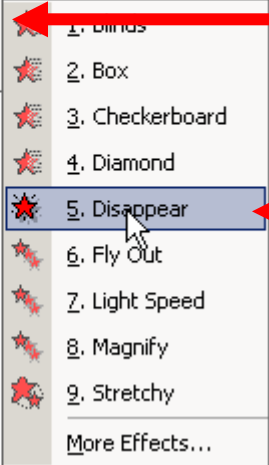

**Select Add Effect**

**Select Exit**

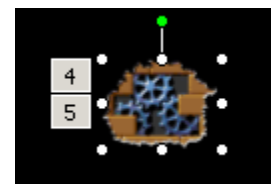

**Select Disappear**

Now the gearbox has two numbers 4 and 5. These numbers indicate that the image will enter as the fourth item in the slide and exit as the fifth item in the slide.

You will need to repeat all of the steps above to create the same effects for the gyroscope.
